1. laravelcrud/app/Http/controller/MahasiswaController.php.

```
MahasiswaController.php X mahasiswaController.php
app > Http > Controllers > 🦬 MahasiswaController.php > PHP Intelephense > ધ MahasiswaControl
       namespace App\Http\Controllers;
       use Illuminate\Http\Request;
       use Illuminate\Support\Facades\DB;
       class MahasiswaController extends Controller
           public function index()
               $mahasiswa = DB::table('mahasiswa')->get();
               return view('index',['mahasiswa' => $mahasiswa]);
           public function tambah()
               return view('tambah');
           public function simpan(Request $request)
               $this->validate($request,[
                    'nama' => 'required',
                    'nim' => 'required|numeric',
                    'email' =>'required|email',
                    'jurusan' => required'
               DB::table('mahasiswa')->insert([
                    'nama' => $request->namamhs,
                    'nim' => $request->nimmhs,
                    'email' => $request->emailmhs,
                    'jurusan' => $request->jurusanmhs,
               return view('simpan',['data' => $request]);
```

2. laravel-crud/resources/views/tambah.blade.php

```
😭 tambah.blade.php X 💮 😭 web.php
resources > views > ♠ tambah.blade.php > ♦ form > ♦ div.form-group > ♦ input.form-control
     @extends('master')
@section('title', 'Tambah Data')
@section('judul_halaman', 'Tambah Data Mahasiswa')
     @section('konten')
     <a href="/mahasiswa" class="btn btn-danger">kembali</a>
     @if (count($errors) > 0)
     <div class="alert alert-danger">
     @foreach ($errors->all()as $error)
     {li>{{ $error }}
     @endforeach
     @endif
     <form action="/mahasiswa/simpan" method="post">
     {{csrf_field()}}

<div class="form-group">
       <label for="namamhs">Nama</label>
        <div class="form-group">
        <label for="nimmhs">NIM</label>
        <input type="number" class="form-control" required="requires" name="nim"value="{{ old('nim') }}"> <br/>

<div class="form-group">
        <label for="emailmhs">E-Mail</label>
        <input type="text" class="form-control" required="requires" name="email"value="{{ old('email') }}"> <br/>
    <<div class="form-group">
